I am a software engineer candidate who has been graduated from Istanbul Technical University Control and Automation Engineering last August. Throughout my education life, I have focused on improving myself in the field of software by participating in student association activities organized in our school. I successfully completed my internships in the software and control departments at Baykar Technology. After graduation, I took full-stack web development training organized by MEXT BİL-İşim. I would like to work in a company that is open to development, where I can use my skills and contribute with my experience, and advance in my career by using the experience that I have gained in this area of work.
